

GENIE COMMAND REFERENCE

PRO PACK | v5.5 | 2026-08-16

Your PRO pack adds market intelligence, premium covers and A+ Content, the interior reference bank, and the puzzle and coloring builder studios on top of everything in Starter. Publishing and business operations are in the MAX pack.

1. STARTING AND CONTROLLING A BOOK PROJECT

Begin, pause, resume, and steer a full production run. Available in every pack.

Command	What it does
Send a book brief (title, marketplace, language, pages/chapter, max pages)	Starts the whole autopilot pipeline. Genie clears the title, designs the book, and writes it chapter by chapter.
"Genie, run on autopilot"	Self-approves every chapter and phase gate; keeps producing without waiting, still delivering each DOCX+PDF preview.
"Genie, resume [Title]"	Continues an interrupted book from saved state. Nothing is lost; Genie saves after every chapter.
"Genie, chapter N: [what to change]"	Corrects a delivered chapter in plain language and re-delivers before moving on.
"Genie, standup"	Daily status: production progress, anything waiting on you, today's plan.
"Genie, run the first-run setup"	One-time setup on a new install: installs required apps, Python parts, and starts the reference libraries.

2. WRITING, FORMATTING, AND IMAGES

The core book-building capability. Available in every pack.

Command	What it does
AUTO per chapter (editorial pass)	Every chapter is line-edited for readability and machine-tell before its preview: uapf-editorial-pass. Every pack.
"Genie, customize formatting for [niche]"	Save your own house style per niche; it is honored on every future book and survives updates.
"Genie, make a large print edition of [Title]"	16 pt minimum body, full repagination, its own "Large Print" listing and cover variant.
AUTO (interior images)	Interior images are generated where the content needs them and inserted inside the margins, captioned.
AUTO (31 niche overlays)	Genie detects the niche from your title and applies that niche's architecture, layout, and QA. You never call these directly.

3. MARKET INTELLIGENCE AND CLEARANCE

Research before and during a project. PRO and MAX.

Command	What it does
---------	--------------

AUTO (trademark clearance)	The moment a title arrives it is screened for trademark risk before any writing. This safety gate runs in EVERY pack.
"Genie, find me 5 promising niches in [area]"	Live niche discovery from Amazon data: what sells, what is crowded, where the gaps are.
"Genie, validate this niche: [idea]"	Checks a niche idea against live competition before you commit.
AUTO / "Genie, keyword research for [topic]"	Competitor table, gap analysis, price and page bands, categories, and the 7 backend keywords, with an interactive chart and map.
"Genie, what's due" (automation calendar)	The publishing feedback loop on a clock: seasonal keyword snapshots and, on MAX, review/sales/backlist sweeps. PRO runs the seasonal job.
AUTO ("Genie, interior references for [niche]")	The interior reference bank fills itself from Amazon best sellers so every book is designed against real winners. PRO and MAX.

4. COVERS AND A+ CONTENT

Premium cover and product-page art. PRO and MAX.

Command	What it does
"Genie, design the cover for [Title]"	Premium HD front/back/spine and full print wrap PDF, measured on the official KDP Cover Calculator. References teach style, never copied.
"Genie, hardcover edition of [Title]"	Case-laminate hardcover wrap: live trim check, hardcover calculator geometry, same art re-laid, higher list price.
AUTO (A+ Content)	Dense infographic A+ modules for your product page, at the correct dimensions.
"Genie, build the puzzles for [Title]"	Code-generated word search books: audience presets incl. senior large print, verified answer keys, full solutions. PRO and MAX.
"Genie, build the coloring pages for [Title]"	Bold-and-easy or detailed line art with a mechanical quality gate (300 DPI, clean, margin-safe). PRO and MAX.

5. PUBLISHING AND BUSINESS OPERATIONS

Everything after the book is finished. MAX only.

Command	What it does
AUTO (KDP metadata package)	On completion: professional description, final 7 keywords, categories, and the machine-readable publish manifest.

ALWAYS-STOP GATES (NO COMMAND OVERRIDES THESE)

- **The final Publish click:** Confirmed by you per book, per platform. Genie never publishes on its own.
- **Anything that spends money:** Ads budgets, paid promos, and price changes are confirmed with the exact amount first.
- **Account, bank, and tax details:** You enter these yourself. Genie never handles credentials or payment data.

- **HIGH-RISK trademark titles:** Stopped with safer alternatives offered. No flag overrides this.

More with Genie: publishing, launch, ads, reviews, royalties, audiobooks, author brands, and multi-platform tools are available in the Max pack. Contact the studio to upgrade; your books, settings, and license all carry over.
